Offline Privacy

Strangers can easily obtain your information through your devices and physical objects

Day-to-Day

- Check card readers for suspicious devices attached
 - These could steal your card information!
- When strangers ask personal questions, leave without answering
- Destroy unnecessary documents containing private information.

Source: <https://krebsonsecurity.com/wp-content/uploads/2011/02/greenskimoff.jpg>

Don't log on to Public Wifi

- This is less secure than your home wifi
- These can become doorways into your devices
- Experts can steal data from your device

Don't use or disclose secure information while connected to a public network

Protect Your Devices

- Lock all documents/devices containing private information
- Log out of devices before leaving them unattended
- Keep written passwords locked and hidden

Otherwise...

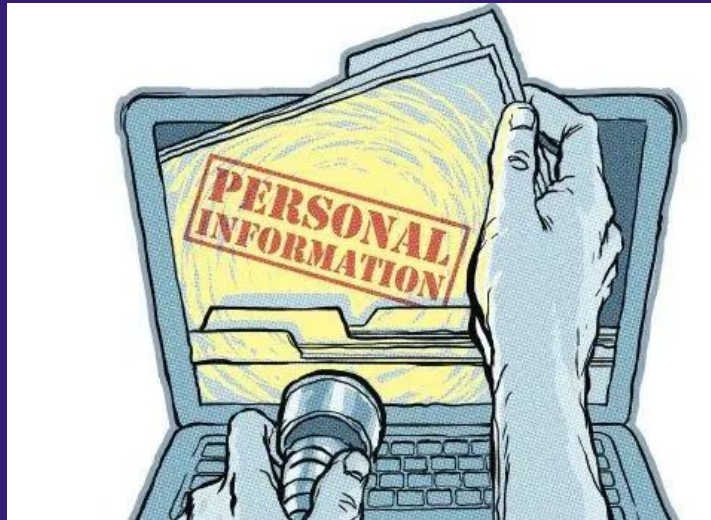

Swisher

8 minutes ago · 🌐

I am a thief. I stole a girls phone from the Panera Bread I work at in downtown Evanston on Saturday. Unfortunately for me, I was arrested last night and the cops found the phone I stole and got it back to the girl it belonged to. Stupidly, I had logged in on the phone to Facebook and twitter so now, the owner can type whatever she wants on my accounts. Karma's funny like that huh? Maybe this will teach you some honesty and you'll be smart next time not to take things that don't belong to you. Idiot.

Online Privacy/Social Media

Passwords

You save **A LOT** of private information on your devices and accounts.

Passwords are the first line of security protecting that information.

Strong passwords will prevent unwanted access.

Strong Passwords Protect Privacy

Weak Passwords use:

- consecutive numbers
- your birthdate
- Less than 8 letters, numbers, or symbols

password

[pas-wərd] *noun*

a series of letters, numbers and characters written on a post it note and stuck to your computer monitor.

< Don't do this!

Strong passwords are easy to make, but hard to crack!

- Use more than 8 letters/numbers/symbols
- mix up the words for your passwords
- Keep your passwords unique (don't reuse)

The Internet and You

Anyone can see what you share online

Disclosing your personal information is hazardous

Social Media is NOT Your Journal

Don't post:

- Travel Plans
- Your Location
- **ANYTHING** used to find you

Don't share :

- Phone Numbers
- Email Addresses
- Social Security Numbers

Consider Your Photos

Was this photo taken with everyone's consent?

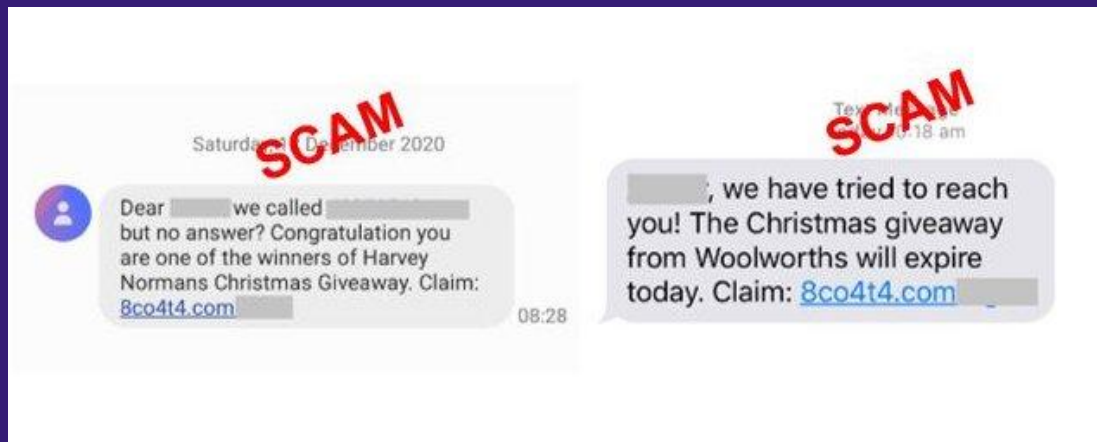

- Do you have their permission to post it?

Does this photo reveal anyone's:

- home address?
- license plate number?
- phone number?
- identifiable information?

Social Media Interaction

- Ignore giveaways, contests, and get-rich-quick offers
 - These scams are used to steal your personal information

- Beware of prying individuals asking for your private information

Remember

Anyone and **Everyone** can see what you're
posting
